Radio Frequency Interference Statement

"This equipment generates and uses radio frequency energy and if not installed and used properly, that is, in strict accordance with the manufacturer's instructions, may cause interference to radio and television reception. It has been type tested and found to comply with the limits for a Class B computing device in accordance with the specifications in Subpart J of Part 15 of FCC Rules, which are designed to proved reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

..... reorient the receiving antenna
..... relocate the computer with respect to the receiver
..... move the computer away from the receiver
..... plug the computer into a different outlet so that computer and receiver are on different branch circuits.

If necessary, the user should consult the dealer or an experienced radio/television technician for additional suggestions.
The user may find the following booklet prepared by the Federal Communications Commission helpful: "How to Identify and Resolve Radio-TV Interference Problems."
This booklet is available from the US Government Printing Office, Washington, D.C., 20402, Stock No. 004-000-00345-4."

Note You can determine whether your computer is causing interference by turning it off. If the interference stops, it was probably caused by the computer or its peripheral devices. To further isolate the problem:

Disconnect the peripheral devices and their input/output cables one at a time. If the interference stops, it is caused by either the peripheral device or its I/O cable. These devices usually require shielded I/O cables. For Epson peripheral devices, you can obtain the proper shielded cable from your dealer. For non-Epson peripheral devices contact the manufacturer or dealer for assistance.

WARNING

This equipment has been certified to comply with the limits for a Class B computing device, pursuant to Subpart J of Part 15 of FCC Rules. Only peripherals (computer input/output devices, terminals, printers, etc.) certified to comply with the Class B limits may be attached to this computer. Operation with non-certified peripherals is likely to result in interference to radio and TV reception.

NOTICE

TABLE OF CONTENTS

Contents of the Operating Manual

This Operating Manual is composed of five chapters and seven appendices. The contents of each of the chapters is as shown in the index below.

Chapter 1 GETTING ACQUAINTED
Describes the parts of PX-4, explains its functions, and introduces the hardware and software components of the system.

Chapter 2 OPERATION
Provides a detailed explanation of first-time operating procedures for PX-4 and how to use its various convenient features. Lists the CP/M commands.

Chapter 3 STANDARD INPUT/OUTPUT INTERFACES
Explains the functions of the standard I/O interfaces built into PX-4 and how to use them.

Chapter 4 OPTIONAL DEVICES
Introduces the optional devices which can be used with PX-4 and procedures for connecting and using them.

Chapter 5 UTILITY ROM
Describes procedures for using CP/M transient commands provided in the PX-4's Utility ROM.

Appendices
Provides a variety of technical information regarding PX-4's hardware and software.

This manual is intended to be read in sequence starting from Chapter 1. However, if you already have some experience with computers or want to start programming in BASIC immediately, you may start reading from Chapter 2.
