"your BASIC software magazine"

# MELT DOWN

# BUS - 80 IS HERE

It costs \$100 for the documentation and/or an additional \$100 for the software on diskette. We highly recommend subscribing to the complete program - documentation PLUS software.

In adopting this approach, we're going straight for the jugular (so to speak).

We anticipate a very competitive market for business software relating to the TRS-80 within the next year, and wish to establish ourselves immediately in a dominant position. In doing so, we are presuming over 1,000 participants in the BUS-80 project. Pricing accordingly, we truly feel BUS-80 will become such a fantastic bargain that few serious businessmen who intent to use a TRS-80 within their enterprise could possibly pass up the value offered. Really, how could you pass this up?

We're sure you must be interested in just what you'll be getting. Well, just about everything you need! Within the year, (and probably within six months) you'll receive a disk-based Inventory system - Accounts Receivable system - Accounts Payable system - General Ledger system - Sales - and Payroll.

We're not talking about stripped-down systems

Elements of BUS-80 are already prepared and have been sold individually to satisfied customers for as much as \$150. The Name/Address system requires an entire diskette itself (over 50,000 bytes) with some optional subroutines relegated to another supplementary disk.

BUS-80 is not only competitive, it will set the standard by which value is compared. And that standard will be hard to meet.

We would like it understood from the outset that while BUS-80 will deliver a core system for an extremely reasonable price, we'll also be offering other pieces of software for general sale. Usually, BUS-80 participants will be given a discount - in any event, by today's standards, tremendous value will be realized. **The first element of BUS-80 is currently being offered**

THAT'S THE PITCH - BELIEVE IT - IT'S TRUE!

SoftSide magazine is continually seeking original articles and software for publication. Imagination and variety in concept and content are the rules at SoftSide — not the exceptions. Articles are purchased on a per-page basis, based on content and applicability. Our policies with respect to software purchase are highly individualized, and offer the programmer several options, including one-time publication rights, outright purchase, and royalties on sale of pre-recorded cassettes. For more information, please write: SoftSide, PO Box 68, Milford, NH 03055.

For uniformity, we have adopted the Radio Shack TRS-80 Level II BASIC as the BASIC dialect used within the pages of this magazine. It was chosen because it stands to become the most commonly used dialect among microcomputer users and because it shares a common heritage with the many microcomputer languages produced by Microsoft.

SoftSide is published monthly by SoftSide Publications, 17 Briar Cliff Dr. Milford, NH 03055. Telephone: 603-673-5144. Subscription rates: USA bulk rate — \$16 per year. USA first class, APO, FPO, Canada, Mexico, overseas surface mail — \$25 per year. Overseas airmail — \$30 per year. All remittances must be in U.S. funds. Mail subscription inquiries to: SoftSide Subscriptions, PO Box 68, Milford, NH 03055. Entire contents copyright 1979 ©SoftSide Publications. All Rights Reserved.

# Outgoing Mail

Some straight talk about your first million.

If you are going to make your first million writing a computer program this year, there are overwhelming odds against you. Despite the wild claims that have appeared in other places, great fortunes are not yet available. We have recently been able to verify our suspicion that the TRS-80 Software Exchange is the largest independent supplier of TRS-80 Software. The time has come to drop the hoopla and talk straight.

While others make wild claims of a market of 50,000 to 75,000 buyers for a single game, that is not very likely. Micro Chess has claimed 50,000, but it is available for PET, APPLE, and level I and II TRS-80, and is even sold by Radio Shack. Despite the claim to be the first "Gold Cassette", the honor is clearly held by Radio Shack's Blackjack and Backgammon tape.

Here are the facts, so that you can draw your own conclusions. A few more than 150,000 TRS-80's have been sold. Perhaps 50,000 of these have gone to big business like the oil companies and other locations where game use will not be significant. We suspect that another 30,000 computers are disused and practically forgotten. Perhaps another 5,000 computers serve as second computers for people like myself, our publisher, and several members of the Pittsburgh Computer Club who have more than one TRS-80. Another 5,000 are probably in the hands of mainframe programmers who are using them for machine language programming or dedicated applications. That leaves about 60,000 people to sell to. Only half of them read the magazines, so you would have to sell through Radio Shack to contact the rest. Of the 30,000 left, many would rather die than purchase software. They write, they trade, they share, but they do not buy.

We have a list of 15,000 computer owners that we send the TRS-80 Software Exchange catalogue to. It is an active list, and we have sold to a very high proportion of them. By talking to our programmers, we have discovered that no one but Radio Shack is coming close to the amount of TRS-80 software we are selling. We have quite a number of authors who have also sold programs to Sensational Software (Creative Computing) and Instant Software (Microcomputing). Most of them have sold programs to the others only once, then they came back to us. They came back because they were making more money. I should not complain. Instant Software's full page ad in the July issue for Santa Paravia should do well for me. If they have it long enough and continue to promote it, it may even make more than it made for me in the six months it was sold by the TRS-80 Software Exchange. But the volume of the Software Exchange has tripled since that period.

How much do you make from a program? Most of the names that are familiar to you from our pages are people who are receiving about \$300 a month in royalties from us. We do have an author receiving far over \$1000 a month in commissions, but most of the regulars are making about \$300. They are not making it from a single program, but from several. Most of our programs pay \$10 to \$100 a month in royalties. For example, my own average monthly income during April and May was \$8 for Sink Um, \$25 for Pork Barrel, and \$102 for X-Wing Fighter; among the nine programs offered. Our sales have increased since then, so the figures may be higher now. But I am in little danger of entering an outrageous tax bracket.

You can have a good part time income, and a couple of our writers have now quit their regular jobs to write full time. If you are interested, here are some hints. Learn to write well, including documentation as well as programs. Become proficient as a programmer. Write regularly, perhaps a good program each month. It will pay to develop a specialty, such as Leo Christopherson's brilliant animation, Scott Adams' adventures, or Lance Micklus' machine language utilities. As for marketing; if you can sell it to Radio Shack, do it. Their percentage is low, but their volume more than makes up for it. If another publisher will guarantee you \$5,000, or guarantee to spend several thousand on specific ads for your program, you should do well. Otherwise, you will probably do best with us. We find that even when we carry another company's line of software, we rapidly become their largest customer.

Since the name of the game for a software house is repeat business, we have a lot of reservations about two suppliers. Personal Software and Instant Software are having terrible customer relations problems, mainly with slow delivery. We ordered Time Trek from Personal Software, and after several long distance pleading calls, finally got a small shipment; for the PET! We hope they get their act together, for they have some fine programs, and we like to sell the best. Another way to judge a publisher is to look at their ads. Do they stick to their own magazine or advertise widely? Do they buy full pages or small ads? We have advertised in Byte, Creative Computing, 80-US, Personal Computing and the C.I.E. Newsletter. Byte has done so well for us that we are experimenting with two page ads there.

While we are waving dollar signs in front of your eyes, Softside would like a wider variety of articles. We want something for our readers when they get tired of typing at the keyboard. How about some good general interest articles, reviews, or perhaps some crystal ball gazing? If it is too technical for SoftSide we might still be able to use it in PROG-80.

Now, if you will excuse me, I am going to keep at our feature article while I learn how to singlehandedly shut down a nuclear disaster. After all, I live only a few hours from Three Mile Island, as the wind blows! I used to play and fish there, as a child.

# GWB

**A UTILITY PROGRAM  
THAT GREATLY EXTENDS  
THE KEYBOARD VIDEO  
AND PRINTER  
SUBROUTINES IN YOUR  
LEVEL II ROM!**

KVP runs under DOS or Level II BASIC. It is relocatable under your control, and so may be used simultaneously with other machine language programs.

by Lance Micklus

**Here are some of the things you'll be able to do:**

**USE AN EXTERNAL KEYBOARD**

Or, use any other serial input device in place of the TRS-80 keyboard

**PRACTICALLY ELIMINATE KEY BOARD BOUNCE** The amount of debouncing is user-adjustable

**DISPLAY UPPER AND LOWER CASE LETTERS** on your video monitor screen

**SIMULATE A RADIO SHACK SCREEN PRINTER** using an ordinary printer

**USE MOST ANY ASCII SERIAL PRINTER** such as Teletype 33 or Spinterm

**EXCHANGE PROGRAMS WRITTEN IN BASIC WITH OTHER COMPUTERS** From the Sorcerer to the IBM 370 (and TRS-80's, too!)

**At least 16K memory required  
A UTILITY PROGRAM**

**Self-relocating for 16K, 32K, or 48k systems  
\$24.95 on tape \$29.95 on disk**

## **LEVEL I in LEVEL II** by APPARAT

**Remember the Good Old Days? . . . You can recapture them!**

Level I BASIC interpreter loads in top 4K of any 16K Level II TRS-80. Allows unmodified load, run, and CSAVE of Level I programs — no conversion hassles! Great for teaching beginners, young and old, to program in BASIC.

"System" tape/Level I for Level II, 16K - \$15.00.

# MELT DOWN

**Get set to take command! The event: very high critical mass, water pressure low, radiation level getting dangerously high! Every second counts, and if you fail, the grim result will be a massive meltdown, with elimination of all life within a 250-mile radius. Take charge, and good luck!**

**by Michael Winter**

Since their introduction in the 1950's, nuclear power plants have been an important step in man's quest for a cheaper, non-polluting form of energy. But with this new-found energy source came some problems. The first problem was how to safely store highly radioactive substances without releasing radiation - finally solved by means such as thick lead shielding and underground salt mines. The second was how to control the reactor while the reaction was taking place; scientists dealt with that by developing large, complicated power plants with many gauges and computers to help run them. But despite all this technology, nuclear power plants still can have accidents.

In this simulation you get your chance to take command of a nuclear power plant and find out what it is really like. When you first take control you will notice that there are only a few meters - not the assortment of hundreds found in a real plant. Reason: all the back-ups in this "plant" have been eliminated, and the meters you see are of an advanced nature, so you never get a "false reading". At the bottom of the screen will appear a time clock, and a description of the event which is currently taking place in the plant. To win this game requires a player with the ability to look the entire situation over, and determine quickly what steps are necessary to bring the reactor back under control.

To regain control, you must have everything in a stabilized condition - i.e., water pressure must read approximately 5, core temperature must also read approximately 5, etc. The only meter that is excluded from reading as close to 5 as possible is the emergency core cooling level indicator. This meter should read as high as possible. All of the above factors are influenced by your skill level.

At skill Level 1 the computer will consider any reading above 1 on the emergency core cooling level meter as okay, whereas at level 5 the computer will only consider anything above 5 as acceptable. Also at Level 1 the computer will accept readings from all the other meters of 3.5 to 7.5, but on level 5 the meters **must** all read exactly 5.

Every three seconds, as noted on the time clock, the computer checks the complete status of the plant, at which point you may find that you have won, or lost. The computer will also check the plant status anytime you hit a key. It is advisable to be careful about which keys you hit,

because the wrong key could end the game! Also along with checking the win or loss factor every three seconds, it increments or decrements each meter reading depending upon the event. Changing the control rod level will cause every meter to reflect that change immediately. When the control rods are raised (withdrawn), fission will occur more rapidly, thus increasing the core temperature. Lowering them will have the opposite effect.

When playing this game it is important to understand that not only will each command directly affect the meter it is aimed at, but also the entire reactor. For example, releasing core coolant will of course lower the core temperature, but it will also affect all the other meters because as the core temperature lowers, room temperature drops; less heat is released, the amount of steam decreases and the water pressure will go down; because there is less water pressure the turbine speed will decrease. As you can see, every meter is dependent upon every other, just as in a real plant. The core temperature is the only factor in determining if you have lost, although everything else is affected as explained above. If the core temperature hits 9, you lose. It is also necessary to keep an eye on the water pressure. If it reaches 9, the pipes will burst, causing a temporary loss of core cooling. This is similar to what happened in the movie, "**The China Syndrome**".

This is not the type of game you can win the first time you play. It takes time to develop the

insight and reflexes necessary for victory. The most important thing you will have to learn is what each command affects, how to weigh the advantages and disadvantages, and how to make a logical decision on the best course of action.

When I first set out to write this program I was not at all sure which direction to go in. After seeing "China Syndrome" and hearing about Three Mile Island, I decided on a complete working model of a nuclear plant.

The first problem was to determine which meters, out of the vast assortment in an actual plant, were the most important. The meters you see as you take command are there because of their practical value to the program and my feeling that they give the user the most realistic model of an actual plant.

Next, I decided to give the program as much real-time action as possible. To do this I used a flashing cursor and a real time clock. I set up the clock so that every three seconds the plant's complete status was checked. Then I made up a list of all the things I could think of that would go wrong, and put these in a list of data statements, along with the meter readings for each event, and the direction each meter would move when the status was checked. I listed the possible commands, and picked the ones I felt were most realistic. Each command had to interact with the meters; to accomplish this I devised two formulas, in which the input

would be a number from 1 to 9, and the output would be the correct screen position to display a given number on a given meter. The only difference between the two formulas is that formula 2 can show any number from 1 to 9 in steps of 0.5, where formula 1. only displays the data in steps of 1. Finally, I wrote the routine to display the control rods.

The routine which flashes the cursor is very easy to do, and adds a very nice touch to all real-time programs. With a little extra work the routine could be modified to do anything - from displaying input, to delaying X seconds, and if no input is given, continuing on with the rest of the program. The bar graph routine which displays the control rods could also be modified for use with other programs. Finally, the routine which prints out "You have won" could be used in any other program, and its printing delay time is very simple to adjust.

# HARDWARE

## THE HARDSIDE™ OF SOFTSIDE ?

**NEW! TRS-80 Computers 10% off!**

Effective July 1, Radio Shack dropped the price of TRS-80 equipment. On the same date, we received authorization to sell the complete TRS-80 line, at 10% below the new low Radio Shack price. This all new equipment, with Radio Shack warranty and service, is now made more affordable than ever!

If you're looking to save even more, consider Hardside's used equipment department for prime condition, previously owned TRS-80 equipment.

Do you have something to sell? Hardside will buy any used Radio Shack TRS-80 equipment in good condition. Refer to our price list below.

So . . . if you're looking to buy or sell TRS-80 equipment, look to us first!

# HEADQUARTERS

## EXIDY SORCERER

Until recently, you couldn't buy a microcomputer with the power and features of the Exidy Sorcerer. Now, an 8K RAM, 12K ROM Sorcerer is only \$995.00. Advanced features include built-in monitor in ROM (including memory and video tests), ultra-high resolution graphics (512 x 240), upper/lower case, user-definable character set, and 1200 band cassette I/O. Plus, 64 x 30 video (displays twice as much text as TRS-80), built in RS-232, parallel port, and the most complete keyboard of any microcomputer on the market. And, best of all, the Sorcerer is compatible with both CP/M and the S-100 bus for unlimited software and hardware expansion. Take a step up to Sorcerer power today!

### PRICE LIST

<b>Sorcerer Computer — 8K RAM</b>	<b>\$995</b>
16K RAM	\$1145
32K RAM	\$1295
48K RAM	\$1445
<b>ROM Software Cartridges -</b>	
Word Processor	\$99
Editor/Assembler	\$99
BASIC [Included free with computer]	\$99
<b>Hardware Expansion</b>	
S-100 Expansion Unit	\$349
S-100 I/O Expansion Kit	\$199
<b>LEEDEX Video 100 monitor</b>	<b>\$139.95</b>

(The Sorcerer requires a video monitor or connection to a TV through an RF modulator.)

## Histograph/Scattergram

by Gary S. Breschini

**Histograph** constructs a five- to fourteen-element bar graph. User specifies the range of data and number of bars in graph; program sets upper and lower response limits for each bar element. Graph composed in "real time" as data is entered.

**Scattergram** plots XY information for visual analysis of trends. Extensive documentation.

# REWARD

## \$50

---

**"BADLANDS GANG"**

Reward for the capture, dead or alive, of any and all members of the notorious "Badlands Gang". Wanted for stagecoach holdup, train robbery and shooting three clowns, four ducks, and a flying arrow  
**APPROACH WITH CAUTION!**

---

# WANTED: DEAD OR ALIVE!

# SHOOTING GALLERY

**A flying arrow? That's right.  
With SHOOTING GALLERY you can prove, once and  
for all, who is the fastest gunslinger in town!**

**by Frank B. Rowlett**

So, you're a crack shot who draws a bead with deadly accuracy? Well, you might not get your name on a poster, but you will be able to prove who's got the coolest, steadiest hand in town (and rid yourself of repressed hostilities at the same time).

Shooting gallery is modeled after

the carnival and arcade games where a nickel once bought you ten shots at an assortment of animated targets. These days, the carnivals seem to charge half a dollar, which means that the savings from a few games played on your TRS-80 should go a long way toward paying for that new disk drive!!

## 'SHOOTING GALLERY'

# PERCOM

## DISK DRIVES Now in Stock

The TRS-80 Software Exchange is pleased to offer single and dual Percom Disk Drives for your TRS-80. These are reliable, high quality drives, fully compatible with the TRS-80 and Radio Shack's drives.

### Enjoy these advantages:

- Fast access time
- 110K/40 tracks vs. Radio Shack's 89K/35 tracks
- Lower cost — save \$100 over comparable units
- Available NOW!

**Single Drive**      \$399.00

**Dual Drive**      \$799.00

Cable (required) — \$29.95

**NOTE:** All disks require TRSDOS software, available only from Radio Shack.

**TSE TRS-80 Software Exchange**

MILFORD, NEW HAMPSHIRE 03055

## It's Back to School Time!

If you're heading back to school, or work, this fall, you probably have often thought that it would be a lot easier if you didn't have to "hunt and peck" at the typewriter or computer keyboard. If you could only double your typing speed, the job would be done in half the time! And, with increased speed and confidence comes increased accuracy.

# TYPING TUTOR

by 80 US

**Typing Tutor** is a set of programs designed to teach you touch typing — from the basics of learning where the keys are, to practice drills at speeds that would make a Selectric shudder! Each lesson is displayed on the screen, including, at the early stages, a keyboard diagram. You are quizzed and graded, and you progress at your own pace. When you have mastered a lesson, the computer advances to the next, using CAI (computer aided instruction). Progress is fast, painless, and even fun as you keep pushing to break your own record.

So, whether you're going back to school or just want to enter programs from **SoftSide** that much faster, **Typing Tutor** can help.

**Order a copy today and be a better typist by next week.**

**Level II, 16K — \$19.95**

**TSE TRS-80 Software Exchange**  
17 Briar Cliff Drive Milford, New Hampshire 03055

# SoftSide Presents:

## A Page from The BASIC Handbook by David A. Lien

The VAL function is used to convert numbers which are written as strings, back into numeric notation. VAL has the effect of stripping off the strings or dollar sign.

For example:

```
10 AS="35"  
20 PRINT VAL(AS)
```

prints the number 35 as a numeric value.

Function

### TEST PROGRAM

```
10 REM 'VAL' TEST PROGRAM  
20 AS="45.12"  
30 A=VAL(AS)  
40 PRINT "IF THE STRING 'AS' IS CONVERTED TO THE NUMBER 'A'  
50 PRINT "THEN THE VAL FUNCTION PASSED THE TEST."  
99 END
```

### SAMPLE RUN

```
IF THE STRING 45.12 IS CONVERTED TO THE NUMBER 45.12  
THEN THE VAL FUNCTION PASSED THE TEST.
```

### VARIATIONS IN USAGE

Some computers (e.g. the TRS-80 Level II and other Microsoft variations) allow the use of combinations of numbers and letters with the VAL function, but the numbers must precede the letters. If they don't, the VAL function produces a 0 indicating it did not find a number as the first character.

For example, PRINT VAL("123ABC") prints the number 123.

### TEST PROGRAM

```
10 REM 'VAL WITH MIXED STRING' TEST PROGRAM  
20 AS="12 O'CLOCK"  
30 A=VAL(AS)  
40 PRINT "IF THE STRING 'AS' IS CONVERTED TO THE NUMBER 'A'  
50 PRINT "THE VAL FUNCTION ACCEPTED NUMBERS MIXED WITH LETTERS."  
99 END
```

# ST80D

Lance Micklus'  
ST80-the Smart  
Terminal Program-  
just got SMARTER!!

ST80D contains extensions for disk drive systems to exchange files with a timesharing computer or another TRS-80.

## **USING ST80D, your TRS-80 can do all this and more:**

- Gather and pre-format data, store it on disk, then transmit it to a timesharing computer for processing.
- Processed data from the timesharing computer can then be sent back to the TRS-80.
- One TRS-80 can generate a data base and share it with another TRS-80 thousands of miles away by telephone.
- Users may customize their terminal program by redefining the translation tables. Conversion from one set of tables to another takes only seconds.
- Auto logon feature sends your account name, number and password upon request.
- ST80D can transmit any type of TRS-80 ASCII file, including BASIC programs stored in ASCII format, and most BASIC data files. Binary files can also be transmitted from one TRS-80 to another, allowing even machine language programs to be sent over the phone.

**ST80D is a practical, full-feature terminal program that has been used on a variety of timesharing systems.** These include IBM 370, Honeywell Sigma/6, Harris/7, DECSYSTEM 20, Dartmouth Timesharing, CDC Cyber and HP 2000.

**If you're looking for a professional quality product, not an amateur program, then order ST80D today!**

For 32K  
disk systems -  
**\$79.95**

## A Single-player Game Based on the China Trade of the 1800's

Ply arms and opium in exotic oriental ports, dodging pirates, cutthroats, usurious moneylenders and tropical storms. Should you arm your ship to stand and fight, or keep it light to run swiftly? Will the price of opium still be high in Hong Kong when you return laden with the stuff from Batavia? **Warning:** If you get a polite message from Brother Wu, the moneylender or Li Yuen, the pirate, you'd better pay attention! If you outwit your enemies, you win by piling up a million dollars in profits.

Level II, 16K — \$9.95

# toryBook

by Otto Hansen

Here is an ideal introduction to the computer for young children of pre-school age through about second grade. This imaginative program allows the kids to enter the story and become part of an exciting adventure.

For very young children, best results are obtained when parents read with them, inviting their comments and participation by, for instance, supplying sound effects. Older children can enhance their reading ability with the practice afforded by the ever-changing nature of the stories (which make "rote" reading impossible).

The program asks the child's name and age, the names of his/her best friends, the best-loved pet, the least-liked wild animal, the favorite color and number, etc.; and weaves all of this information into an individualized story which may feature rambling roadways or winding trails, rolling plains, caves or a desert full of cactuses, pearly shells or golden bricks — as the "storyteller" chooses.

Just as with all good children's stories, dangers are survived, obstacles overcome, and the friends always arrive back home unharmed, laden with riches such as lollipops and gumdrops. The ending is happy, and the inexhaustible storyteller will go right on to a new adventure, never short of patience, time or inventiveness, if the child asks.

The speed of presentation is controllable for various levels of reading comprehension. Graphics are used for illustration and animation. And, best of all, your child can spend some time away from the television learning to read and becoming comfortable with the computer at the same time!

[illegible]

**THE LATEST IN A HIGH-LEVEL LANGUAGE SOFTWARE DEVELOPMENT SYSTEM.**

**MMSFORTH** is a new version of the powerful, fast, and structured **FORTH** language, specifically written for the TRS-80. and offers such features as:

- Double precision integer math
- Reverse polish notation
- Blinking cursor, auto-repeat keyboard
- Virtual Memory!
- Editing capabilities similar to Level II
- Supports Z-80 assembly blocks within the **FORTH** structure

**MMSFORTH** is available in two versions; a complete version for disk systems and a close approximation to that version which is designed for the Level II, 16K tape system. The disk version offers "virtual memory", supports one to four disk drives, does not require any other disk operating system, and also has both disk and tape input/output capabilities.

TAKE ADVANTAGE OF A POWERFUL STRUCTURED LANGUAGE WITH THE EXECUTION SPEED OF A COMPILER.

MMSFORTH is available now from TSE.

# MMSFORTH

INTRODUCTORY  
OFFER

The **MMSFORTH** system diskette or cassette tape provides for the expansion of **FORTH** commands by the user. There are many programs and routines provided as examples of **FORTH** programming, such as:

## Routines For:

String Handling  
Graphics  
File Sorting  
Screen Printing

## Programs For:

Game of Life  
Checkbook Balancing  
String Sort  
Number Guessing Game

The **TRS-80 Software Exchange** intends to fully support the introduction of **MMSFORTH** with the development of supporting application modules. Early **MMSFORTH** projects are:

- floating-point package •
- assembler/cross compiler to provide •
- standard TRS-80 load modules
- large flexible mailing list system •
- generalized data base management system •
- word-processing package (**FORTHWRITE**) •

**MMSFORTH**, by **Miller Microcomputer Services**, includes introductory documentation with further references to the **MicroFORTH** primer of **FORTH, Inc.** This manual is an invaluable reference for the **FORTH** programmer, and can be purchased separately by anyone desiring more information on the **FORTH** language structure.

## 30-DAY INTRODUCTORY PRICE

<b>MMSFORTH</b> cassette version, Level II, 16K	\$34.95
<b>MMSFORTH</b> disk version, Level II, 16K	44.95
<b>MicroFORTH</b> primer	15.00

## The Little Book of BASIC Style

by John M. Nevison

Here is the ideal reference for anyone who wants to write better programs in BASIC. The Little Book of BASIC Style is suitable for all levels ... from junior high school student to research scientist. A work meant to be read and reread. Achieve fluency in computing.

Indexed, illustrated. 151 pages.

\$5.95 + \$1.00 handling

**TSE TRS-80 Software Exchange**  
17 BRIAR CLIFF DRIVE MILFORD, NEW HAMPSHIRE 03055

## FORUM-80

A new service for the computer hobbyist is FORUM-80, a network of interactive computer-based message systems. Use of the network is free; required equipment is a modem, RS-232C, and a terminal program such as ST-80 or ST-80D. Simply set your RS-232 to 8 bit word, 300 baud, 1 stop bit, no parity, and dial up one of the numbers below. When you hear a high-pitched tone, place the handset on the modem and press "ENTER". The systems are self-prompting and a lot of fun!

Kansas City, MO	816-861-7040
Chicago, IL	312-925-0259
Fl. Worth, TX	817-923-0009
Orange County, CA	714-730-1206

(New systems come on line each month. Try one of the numbers above for a listing of a FORUM-80 in your area.)

## 16K MEMORY KITS

by ITHACA AUDIO

**Everything you need to up-grade your TRS-80 to a 16K system**

- 8 tested and guaranteed 16K RAM's
- New programming jumpers
- Easy-to-follow instructions
- Only tool required is a household screwdriver

Each kit is 100% guaranteed against failure. Add high quality, high density memory for less than you would expect to pay!

**\$99.95**

**TSE TRS-80 Software Exchange**  
17 Briar Cliff Drive Millford, New Hampshire 03055

# MAIL LIST II

by BUS-80

IDEAL for all sorts of small mailing applications, such as small businesses, clubs, churches; for advertising, newsletters, announcements, press releases -- endless possibilities. We use it for a 15,000-name mailing list, yet it is perfect for lists as short as 100 names! You can store 1000 records per data disk, use as many disks as you like . . .

Each record includes:

RECORD NUMBER  
RECORD CODE  
COMPANY NAME  
NAME  
ADDRESS  
CITY/STATE/ZIP  
PHONE NO.  
GREETING  
PRODUCT CODES  
DATE

Utilities include SORT, MERGE, MOVE, BREAK, EXAMINE, and UPDATE.

Prints labels 1, 2, or 3 across.

Sequential file structure makes the most efficient use of disk space: all alphabetic items can be as long as necessary.

Allows data entry on a 4K, Level II cassette system.

2 Disk Drive, 32K minimum \$99.95

**TSETRS-80 Software Exchange**

# X-WING II

by Chris Freund

For the thousands who have enjoyed X-Wing Fighter, X-Wing II presents a totally new element in the game!

You are Pilot of  
an X-Wing  
fighter ...

Your  
Mission,  
Destroy the  
Death  
Star!

Where X-Wing I left Death Star looming on the screen, **X-Wing II** lets you guide your fighter into the trench, find the exhaust port, aim and fire — all the while avoiding enemy fighters. Excellent graphics, 12 levels of play, and extensive INKEYS commands make this one of our most exciting "real-time" games.

Level II, 16K — \$9.95

# MORSE CODE TUTOR

by Donald E. Smith

Whoever said, "Practice makes perfect", must have been an instructor of Morse code. Most types of learning are best reinforced by drill, but rote learning, be it of a language or vocabulary, multiplication tables or musical scales, benefits most from practice and repetition. To that last category we can also add Morse code, which is really nothing more than a new alphabet.

Three methods of learning Morse have emerged over the years. Each has its drawbacks. A friend could send practice messages; this requires a friend with time, patience, and a good knowledge of code. Records and tapes are available that promise "20 WPM in only 2 Weeks!"; these are like studying for an eye examination once you know what the letters are — the difficulty and the value are gone. The third alternative, and up to now the best, has been to tune in the American Radio Relay League's daily code practice sessions. These provide varying material and a natural sound, but require that you practice at the scheduled times, which may not be convenient.

Now there is a better way to study. Simply enter this program, place an AM radio (tuned near 540) at the right of your keyboard, and get set to learn the code in less time than you thought possible. When you've worked your way up to 20 WPM on familiar text, you'll be a certified "brass pounder"!

```

*In the beginning there was Level I*

# THEN THERE WAS LEVEL II NOW - LEVEL III BASIC

## **Now do more than ever before With the most powerful Basic you can buy For the TRS-80.**

Open the manual and load the cassette. Then get ready to work with the most powerful Basic interpreter you've ever had your hands on . . . Level III Basic for Radio Shack Computers. It loads right on top of the Level II ROM, and in just 5K of space, opens up your capability to new dimensions. For starters, this new cassette-based interpreter gives you the whole catalog of disk programming power. Plus graphics commands. Plus Powerful editing commands. Plus long error messages, hex and octal constants and conversions, user defined functions and a number of commands never before available on either cassette or disk interpreters!

**EASIER LOADING, FEWER KEYBOARD ERRORS.** G2 Level III Basic eliminates aggravations you've had, including keyboard "bounce" and those super-sensitive tape deck settings. Programs will load easier, and you'll have far less trouble with input errors.

**BASIC ACCESS TO RS-232.** Until now, if you wanted to access your RS-232 interface, you had to work in assembly language. G2 Level III Basic does the work for you, letting you use your interface with Basic statements.

**HAVE YOU WISHED FOR MORE POWER?** This new interpreter gives you 10 machine language user calls for subroutines, long errors messages, a new **TIME\$** call for your real time accessory, plus measure or limit input timing that lets you put a time limit on responses when you're playing games or giving exams. And the list doesn't stop here.

**EASIER AND MORE POWERFUL GRAPHICS.** This new Basic includes three simple commands that can eliminate dozens of program steps. **PUT** transfers information from a designated array to your screen; **GET** reverses the process. **LINE** makes your computer do the work when you input beginning and end points. Give it two diagonally opposite corner locations, and it'll outline the rectangle you're looking for.

**ONLY MICROSOFT COULD DO IT.** G2 Level III Basic was created by Microsoft, the same company that wrote Level II Basic for Radio Shack. And it actually uses Level II as a foundation for this enhanced add-on. By the time you've mastered all it can do, calling up the flexibility of the graphics commands, and even enjoying the convenience of renumbering, you'll wonder how it was all possible. It's like getting a whole new computer for your computer.

**AVAILABLE NOW FOR ONLY \$49.95.** You get the power that might otherwise cost you hundreds of dollars in additional equipment for only \$49.95. Price includes the Users Manual, a Quick Reference Card, and a preprogrammed cassette tape. Load the tape, open the manual, and get ready to work with the most powerful Basic Interpreter you've ever had your hands on. Level III Basic for the TRS-80.

# crypt gr m ne io ca w for de XOMSTVOGA

by Rik Pierce

Puzzle addicts, here's a program for you. If you've ever tried to solve a difficult cryptogram without an eraser, you'll appreciate the convenience of using the computer. And, if you've never experienced the joys of deciphering a real brain-teaser, get ready for a treat!

A cryptogram is a popular puzzle in which a quotation is encoded by a substitution cipher. In other words, for each letter in the original quote, a different letter is substituted; punctuation remains unchanged.

For example:

SAY "HELLO"

might become:

TBZ "IFMMP"

or:

QFL "DGAAR"

The object, of course, is to decipher the original quotation.

Experienced cryptographers have a number of tricks which aid them in solving a puzzle. For

example, in a long quote, the frequency with which some letters occur may closely match that of the language in general (E occurs far more often than Z or Q). In order, the most common letters are E T A O I N S.

Word beginnings, endings, punctuation, and diphthongs may play a part in the decoding process. Most important, though, are short words, which can unlock the vowels in a puzzle in short order. There are only two one-letter words (I and A), and a handful of two-letter and three-letter words.

To tell you any more, though, would spoil your fun. Try one of the first few puzzles in the program's "library" if you're new at the game: they're quite simple. The expert will find tougher problems near the end, or in the evening newspaper. Either way, you'll be using space-age technology to work on puzzles that have fascinated men since the time of Shakespeare!

# Small Business Bookkeeping FOR DISK

Recommended for  
Small Businesses

Based on the well-known Dome Bookkeeping System. Posts expenses to as many as 42 accounts (which you may customize). Produces video and line printer reports for year to last week, this week, year to date; supports cash system of accounting; stores data on disk for fast retrieval.

by Miller Microcomputer Services  
and Roger W. Robitaille, Sr.

Available for 32K  
Disk Systems - \$24 95

**TSE** TRS-80 Software Exchange 17 Briar Cliff Drive Milford, New Hampshire 03055

# TIRED OF DISK ERRORS?

**STOP BLAMING YOUR DRIVES —  
FIX YOUR DOS!**

## NEWDOS

NEWDOS, by Apparat, is the third generation disk operating system for your TRS-80. NEWDOS corrects over 70 errors and omissions in TRSDOS 2.1 and disk BASIC, yet the two are completely compatible! Programs and files saved under one can be used with the other interchangeably. Going from TRSDOS 2.1 to NEWDOS is like going from Level I to Level II: more power, more convenience, greater speed.

### NEWDOS has the power to:

- Use all DOS commands (incl. directory) in BASIC
- Automatically load and run a BASIC program on power-up
- Produce variable cross-reference tables
- Open 'E' to add to sequential files
- Append files
- Use your line printer, as a screen printer
- Renumber BASIC programs
- End keyboard bounce

**And, best of all, say goodbye to system crashes, lost data and wasted time caused by your old, bug-ridden system software.**

**You paid \$500 for your disk drive —  
why struggle with it?**

Apparat's NEWDOS is fully documented and available for only \$49.95 from:

**T&E TRS-80 Software Exchange**

17 Briar Cliff Drive    Milford, New Hampshire    03055

# NEWDOS +

If NEWDOS is the Cadillac of disk-operating systems, then NEWDOS + has to be the Ferrari. NEWDOS + retains all the features of the original NEWDOS, and adds the following utilities:

- Editor-assembler for disk ☐
- Disassembler (Z80 machine code) ☐
- LM Offset-allows transfer of any system tape to a disk file (automatically relocated) ☐
- BASIC1-Level one BASIC saved on disk ☐
- LV1DSKSL - not a typo, this saves and loads BASIC1 programs to disk ☐
- DIRCHECK-tests and lists disk directory ☐
- Superzap-display/print/modify any location in memory or on disk ☐

**Superzap alone is worth the price of this package. With it, we've quickly recovered lost programs, restored killed data files, and saved many hours of effort. The NEWDOS + manual is another plus: clear and concise, it even includes a byte-by-byte explanation of the directory file ... invaluable if you ever need to save a crashed disk!**

The price for all this computer power? That's the best part!  
**NEWDOS +, Just \$99.95**

**NOTE:** Use of this software may require documentation available only with the purchase of Radio Shack TRSDOS 2.1 and/or the Radio Shack Editor/Assembler

# ELECTRIC PENCIL!

Effortless typing is here!

The Electric Pencil by Michael Shrayner is a true word-processing program for the TRS-80. Enter your manuscript, and let your computer do the work. Editing? Just position the cursor with the arrow keys . . . one-key commands let you change, delete, or insert. Fully adjustable margins, left/right justification, variable spacing, page headings, and much more! Save and recall your text with tape or diskfiles. Typing everything from letters to reports is fast and incredibly easy using The Electric Pencil.

Level II, 16K tape - \$100.00  
Disk version - \$150.00
