# ELECTRIC PENCIL!

Effortless typing is here!

The Electric Pencil by Michael Shrayer is a true word-processing program for the TRS-80. Enter your manuscript, and let your computer do the work. Editing? Just position the cursor with the arrow keys . . . one-key commands let you change, delete, or insert. Fully adjustable margins, left/right justification, variable spacing, page headings, and much more! Save and recall your text with tape or diskfiles. Typing everything from letters to reports is fast and incredibly easy using The Electric Pencil.

Level II, 16K tape - \$100.00

Disk version - \$150.00

(comes on tape)

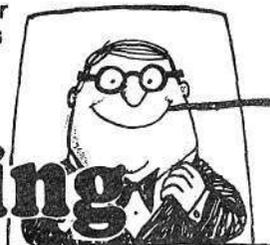

**NEW IMPROVED  
VERSION!**

- Repeat Entry • Data Protection
- Faster and Easier to Use

Trade in Policy - We will allow \$10.00 on the old tape version and \$15.00 on the disk version if you send the original with order.

# Small Business Bookkeeping FOR DISK

Recommended for Small Businesses

by  
**Roger W. Robitaille, Sr.**

Based on the well-known Dome Bookkeeping System. Posts expenses to as many as 42 accounts (which you may customize). Produces video and line printer reports for year to last week, this week, year to date; supports cash system of accounting; stores data on disk for fast retrieval.

With Dome Bookkeeping Journal \$36.95

Tape version of Dome Bookkeeping with Journal \$24.95  
with Journal \$31.95

Available for 32K  
Disk Systems - \$29.95

## COVER STORY

The cover shows three members of the computer generation, children of our staff. Kelly Bishop, Roger Robitaille, Jr. and Robbie Blank, all use computers at home. The first word Robbie ever learned to spell was RUN!

# THE AUTOMATED DISKETTE DIRECTORY

by **George Blank**

All you do is insert the diskette in the drive and type the name or number you use for that diskette. The program automatically reads the directory of the diskette, ignoring invisible files like BASIC/CMD and normal DOS files like DISKDUMP/BAS, and stores it in a disk file.

**Display options include:**

**Printout to screen or line printer**

**Alphabetic sort**

**Search for single program using INSTR**

(A search for TRE would find STARTREK and TREES)

**Index to single disk**

**Search and RUN program**

Three programs on BASIC tape with instructions for loading on a NEWDOS diskette and instruction manual.  
\$14.95

**IMPORTANT:** This program requires the following minimum System:

**NEWDOS by Apparat (Uses CMD"DIR" and OPEN"E")**

**32K of Memory**

**At least TWO Disk Drives**

The logo for The Software Exchange, featuring the letters 'TSE' in a bold, stylized, outlined font with a slight shadow effect.

**The Software Exchange**

6 South Street, Box 68, Milford, NH 03055 603-673-5144

# SoftSide™

YOUR BASIC SOFTWARE MAGAZINE

**SoftSide Magazine** is continually seeking original articles and software for publication. Imagination and variety in concept and content are our primary criteria for acceptance. Payment varies with length, suitability, ease of editing and quality.

Our policies with respect to software purchase are highly individualized, and offer the programmer several options, including one-time publication rights, outright purchase, and royalties on sale of prerecorded cassettes. Program submissions should use Radio Shack Level II Basic, should run in Level II and Disk BASIC, and may not employ coding techniques that cannot be accurately presented in a line listing, such as SYSTEM modules and "super graphics" or other hybrid methods. For more information, please write: **SoftSide**, PO Box 68, Milford, NH 03055.

**SoftSide** is published monthly by SoftSide Publications, 6 South St., Milford, NH 03055. Subscription rates: USA bulk rate - \$18 per year. USA first class, APO, FPO, Canada, Mexico, overseas surface mail - \$25 per year. Overseas airmail - \$30 per year. All remittances must be in U.S. funds. Mail subscription inquiries to: SoftSide Subscriptions, PO Box 68, Milford, NH 03055. Entire contents copyright © 1979 by SoftSide Publications. All rights reserved.

# OUTGOING MAIL

We feel an obligation to share with our customers some of the lessons we have learned the hard way. Why should you have to go through the expense of testing several products to find good ones and bad ones, when others have already done so?

One area in which we have had a great deal of experience is in the use of mini diskettes. After using thousands of them, here are our ratings: Excellent: Dysan; Very Good: BASF, Georgia Magnetics; Good: Verbatim, Scotch (3M), Radio Shack; Poor: Memorex. Out of that experience, we have chosen the lines that we carry.

Another area that concerns us is the input/output difficulties of the Radio Shack TRS-80. Almost all of the problems we have found are linked to communication between devices or to the outside world.

The first and most obvious is the lack of lower case letters. There are three solutions that I know about. You can buy another computer like the Heathkit, you can modify it yourself, or you can

believe the rumor and wait for Radio Shack to offer it.

The next thing that most people discover is the difficulty involved in loading tapes. Radio Shack does offer modifications that help a little, but not enough. We routinely use either The Data Dubber or the AlphaNetics Acu-Data tape digitizers. Even these do not absolutely solve the problem, but they make it livable.

One problem that should be largely solved by now is the CTR-80 dropout problem, where the tape recorder erases little pieces of your tape, destroying it in the process. If you suspect that you have this problem, take your recorder to your local Shack for modification.

Another problem that was supposedly solved was inadequate refresh signals to the expansion interface, causing loss of data in high memory. Radio Shack has tried a half dozen solutions to this one. I have the buffered cable and the "umbilical cord". The newer models are supposed to have solved the problem. If you often lose data in high memory,

take the expansion interface to the Shack.

The ribbon cables, especially to the disk drives, but also to the expansion interface and the line printer, are another source of grief. They make excellent antennas for high frequency radiation. That means that the computer picks up information from fluorescent lights, power supplies and radio stations, and sends interference to your television set. Since moving an antenna affects its radiation pattern, you can try shifting the parts of your system around on the desk and in different parts of the house, but the only solution I know for TV interference is to turn off either the computer or the television.

There are several more woes for Disk users. The Radio Shack Disk Operating System (Version 2.3 has been out since August) is still woefully inadequate. We use NEWDOS from Apparat in-house, but also plan to look closely at VTOS 3.1 from Randy Cook when it comes out. NEWDOS and VTOS are both good systems.

Another disk headache is the incompatibility between the real time clock and the Radio Shack disk drives. The clock interrupts are almost perfectly synchronized with the speed of the disk drives, causing your system to spin and spin and finally give up looking for data. The solutions are to use the VERIFY command from DOS, which cuts your access speed in half, to change the speed of your drive with software (see the September PROG-80), or to buy a better quality drive like the Percom.

My final input/output complaint seriously affects the TRS-80 in business use. In order

to save a few bucks, Radio Shack neglected to install a data separator in the floppy disk controller, blatantly ignoring a warning on the data sheet that applies to the controller chip they use. Most problems with unreliable transfer of information to and from disk come from this short-cut. Percom does offer a data separator, but if you install it, you void the warranty. Personally, I prefer the separator.

When we offer a business system through HARDSIDE, we encourage people to get the Percom drives, data separator, and NEWDOS, and we don't do it to raise the price: in fact, we would be willing to sell an all-Radio Shack System for less than Radio Shack list price, yet the recommended system is even less expensive than that. We do it because we believe that anyone spending two to three thousand dollars for a computer ought to get one that works.

Those of you who are not willing to put up with these problems may be interested in the following announcement. But be careful; IBM BASIC is MUCH less powerful than Radio Shack Level II BASIC.

## **Bargain Sale!**

Those of you who have been looking for an opportunity to upgrade from a TRS-80 to a slightly more powerful computer will be happy to know that IBM has just announced a 20% price cut on the minimum configuration of one of its smallest mainframes. You can now buy a new IBM 3031 with 2 megabytes of main memory for only \$800,000, or \$26,681 a month on a four year lease. Price does not include Blackjack and Backgammon.

# OIL BARON

by Paul Knechtel

## INTRODUCTION

We are all suffering from the high cost of energy these days. Every kind of energy is costing us more and more daily and we are caught in the middle, unable to do anything about it.

Here's your chance to strike back! As Chairman of the Board of your own oil company, you will control your own energy destiny in an attempt to become the first Oil Baron.

Timely investments and sales will increase your company's working capital and allow you to invest in more research and development, and purchase more real estate. Rapid development could mean a shortage of sup-

plies and bring financial instability, while slow development might result in your removal as Chairman of the Board.

The game can be played by two to four players. An average game involving two players requires about one and one-half hours to complete. The game requires strategy, risk-taking, good business sense, and a certain amount of luck.

There are 10 phases to the game as follows:

### PHASE 1: Oil Purchases and Disbursements.

Three options are possible  
1) Buy domestic oil: 2) Buy foreign oil: 3) Release oil to

refineries. First you should examine and compare your oil reserves against your oil requirement. If you find that you need oil, do the following:

A) enter '1' and buy as much of the lower priced domestic oil as you need. The domestic oil availability may or may not be enough to cover your requirements. In the event that you need more oil than your domestic sources can offer, you must buy the higher priced foreign oil. Avoid buying more oil than your stations need or than your refineries can refine unless you get an excellent price per barrel.

B) Once you have purchased all the oil you need, enter '3' and release what your stations require.

#### **PHASE II: Station Profits and Wholesale Gas Reserves Sales**

Station profits from the sale of gas at the pump are reported and you are allowed to sell your reserve oil at wholesale prices to generate quick cash if needed.

#### **PHASE III: Pollution Control and Research**

As with any large refinery, pollution is a constant problem. Here you are allowed to purchase smog control devices which eliminate or reduce damage to the environment. The price of smog units is randomly calculated in each turn sequence. You may however, elect not to buy pollution units if the political atmosphere is favorable. Lobby effort provides more latitude depending on its

strength (that is, the more you spend on domestic lobbies, the greater the political influence with the E.P.A. and the less likely you are to be checked.) Be careful, because if your smog unit need is too great, heavy fines by the E.P.A. (Environmental Protection Agency) and mandatory purchase of smog equipment may be imposed.

#### **PHASE IV: Bar Graphs**

This phase graphically represents profits and present values on a bar graph of the following factors:

- 1) Stock Values: may fluctuate according to the present mood of the stock market.
- 2) Cash Reserves: reports cash on hand.
- 3) Research Investments: reports the total amount spent on research to date.
- 4) Station Profits: shown separately but included in your cash reserves.
- 5) Real Estate Values: the value of all service stations, oil wells and refineries.

#### **PHASE V: Stock Splits**

When a stock splits, you will be notified of the split only if you own that stock. In this case, the price of the stock is cut in half and the number of shares you own is doubled.

#### **PHASE VI: Investments**

This phase allows you to purchase any number of stations, refineries, oil wells, lobbyists, or stocks. Keep a careful eye on the stock market status (the upper right-hand corner of the screen).

### **PHASE VII: Smog Equipment Failure**

Smog equipment will fail at times. You may lose a portion or all of your pollution control devices. Replacements must be purchased at the next possible turn to avoid E.P.A. investigation, and heavy fines. However, depending on the number of units lost and the political climate at the time, you may be investigated by the E.P.A. before you have a chance to buy replacement smog units. If this occurs, quite heavy fines result along with mandatory purchase of smog units.

### **PHASE VIII: Refinery & Smog Graphics**

This phase presents a graphic display of the number of refinery units you own and the number of smog units you currently need to purchase. The solid bar which is interrupted by black boxes across the lower part of the screen indicates your capacity for refinery expansion. The solid vertical lines above it represent the number of refinery units you currently own. In line with each of the refinery units will be a vertical column of four arrows pointing upward. (Some computers may substitute the bracket for exponential notation for this character. If this occurs simply change the ASCII character code in line 9565 to whatever character code looks best to you.) Each refinery unit which is lacking a smog control unit will have a line of arrows directly above it. Thus at a glance, a person can tell how many refinery units he owns and how many of those units currently require pollution control units. If a player desires, a comparison of all player standings can be obtained by entering the number '6'.

### **PHASE IX: Environmental Protection Agency Check**

After Phase VIII, the E.P.A. automatically checks domestic lobby effort. If the lobby effort surpasses a randomly generated number, no smog check will be made. In the event that a check is made, several things can happen based on the political atmosphere. You may be found to have adequate protection, in which case the program goes on to Phase X, or you may be found to be a major pollutor, and heavy fines and mandatory purchases of smog equipment occur.

### **PHASE X: Assets Liquidation**

This is the last phase in the player's turn. If at this point for any reason your cash reserves are below zero, you are automatically charged 50% interest. In addition, if your debts are greater than a randomly generated value, you will go bankrupt and liquidation of your assets ensues.

### **End of Game Determination**

Each turn sequence represents a 6 month period. As Chairman of the Board of your company, you are assigned (randomly) a term of office. The length of the term varies from player to player. If you do not succeed in achieving the title of "Oil Baron" by the end of your term, you are removed from the game. If all players are removed from the game in this manner, no one wins and the game obviously ends. The following criteria are necessary to become an Oil Baron:

- 1) Cash reserves of at least \$10,000,000
- 2) At least 31 refinery units

## The Best Has Gotten Better!

Sargon, the program that came in first in the Creative Computing Microcomputer Chess Tournament, has become Sargon II - **\$29.95**

- A vastly improved game
- Faster response time
- New level 0 for beginners
- Easier to pre-set board
- Hint mode - What does the computer suggest

Sargon II is the program that took on the maxi-computers in the West Coast tournament, and finished in the money! More thinking power than you ever expected in a TRS-80.

Now in stock for immediate delivery!

# SARGON II

6 South Street, Box 68, Millford, NJ 10305 603-673-5144

Call (603) 673-5144 for immediate shipment.

Still in stock - The original Sargon \$19.95

## ATTENTION ALL WAR GAMERS

The war games you have come to love have  
come to the TRS-80!

- River ●
- Hexagonal Grid ●
- Terrain Obstacles ●
- Armor, Infantry, and Engineers ●
- Computer determined combat results ●

This Two Player game is an elementary war game (Kriegspiel is German for "war game") giving a battle between two countries located in opposite corners of the screen. The object is to capture the enemy capital. During play, each piece flashes in turn, displaying the number of moves left. You can move it, wait until you have moved other pieces, skip it, or even go directly to combat after moving only some of your pieces. You must stop and do battle whenever you are adjacent to an enemy piece. In battle, you can be eliminated, the other player can be eliminated, an exchange can take place, or a retreat may be required. You do the brainwork, General; the computer carries out your orders. Strategy and fate determine the battle!

# Accounts Receivable II

---

## HEBBLER SOFTWARE SERVICES

A comprehensive accounts receivable program with billing package offering menu oriented operation, audit trail with running balance for each account, date, description and exact amount for every filed transaction, special input procedures, automatic error checks — uses random data files.

---

### The package which allows you to:

- Maintain receivables files on 200 accounts
  - Add new accounts any time
  - Change information
  - Perform selective information search
  - Assign terms
  - Print listing of overdue accounts
  - Print statements automatically for unpaid accounts
  - Print a custom message on statements
  - Print mailing labels
  - Print an accounts receivable summary for all accounts or unpaid accounts only
  - Post charges and credits at the keyboard
- 

Package includes one master diskette, one data diskette, and in depth instruction manual. Requires TRS-80 with 16K memory, two disk drives, and line printer. **\$79.95**

**TSE** *The Software Exchange*  
6 South Street, Box 68, Milford, NH 03055 603-673-5144

# ADVANCED Personal Finance

by Lance Micklus

First, we took the tape version of PERSONAL FINANCE and converted it for use under DOS. Then many new features were added such as self-verifying files which protect themselves from most common hardware faults, and the BUDGET program which collects data - automatically from the CHECKING program, and manually from the keyboard. Advanced Personal Finance will produce a 30-page report that gives you the total picture of your financial posture. To complete the package, a SAVINGS account program lets you use the one savings account as if it were ten individual accounts. This way you can set a certain amount of money aside for Christmas, save an additional amount for a rainy day, and keep track of how much is for what.

Also included are programs to convert the data file on tape from the regular personal finance program to disk.

On a 32K disk system, the package will handle about 200 checks per month and 900 checks per year. There are 33 different account names which are set up with DATA statements in each program on the disk.

The minimum system required is 32K Disk BASIC with one drive. The addition of a line printer, a second drive, and upper/lower case video display all enhance the features. A second disk (not supplied) is required to store your data, as the program disk is very full.

Price, \$24.95.

Original Tape Version: **Personal Finance** \$9.95

**The Software Exchange**

# TYPING TUTOR

by  
Roy Groth

You probably have often thought that it would be a lot easier if you didn't have to "hunt and peck" at the typewriter or computer keyboard. If you could only double your typing speed, the job would be done in half the time! And, with increased speed and confidence comes increased accuracy.

Level II, 16K — \$19.95

**Typing Tutor** is a set of programs designed to teach you touch typing — from the basics of learning where the keys are, to practice drills at speeds that would make a Selectric shudder! Each lesson is displayed on the screen, including, at the early stages, a keyboard diagram. You are quizzed and graded, and you progress at your own pace. When you have mastered a lesson, the computer advances to the next, using CAI (computer aided instruction). Progress is fast, painless, and even fun as you keep pushing to break your own record.

So, whether you're going back to school or just want to enter programs from **SoftSide** that much faster, **Typing Tutor** can help.

**Order a copy today and be a better typist by next week.**

# DRAG RACE

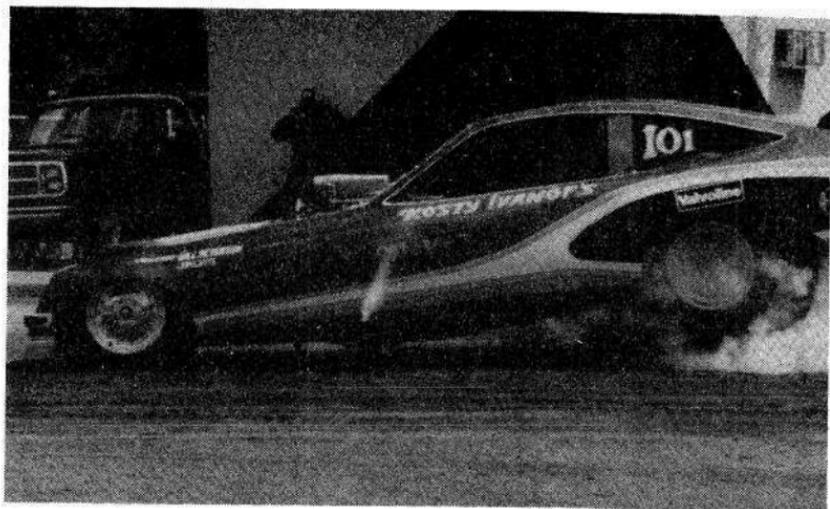

by Chris Freund

This is a very short skill game for those who want to test their quickness and coordination. The player must coordinate shifting and accelerating to get the highest speed possible. The game starts out with the "car" in first gear. The player uses the space bar as an accelerator, and he shifts by using the numbered key of the gear he wants to shift into. The most important thing to remember is that you must let up on the space bar in order to shift. Once the car has been shifted

(you can tell it's been shifted when the tachometer goes down), the player must accelerate quickly in order to keep from losing speed. This is done through the four gears. Time will eventually run out, and the final speed will be stated. Of course, if the player doesn't shift, and his tachometer goes too high, he'll blow an engine. Because an engine blows at random at high rpm's, top speed can be unpredictable, but anything over 130 is good, and anything over 135 is pro.

---

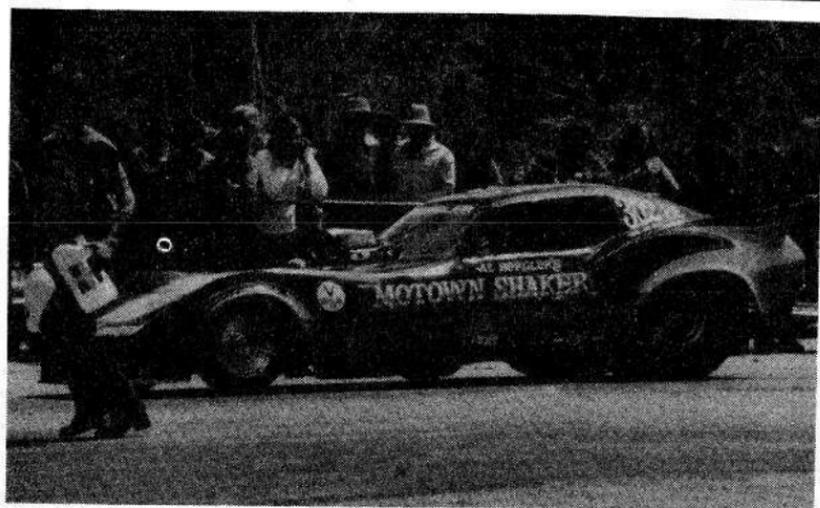

All-Pro, Top-Fuel, Funny Cars - the "Motown Shaker," and "King Marshall" battle to the finish (which doesn't lie far ahead, considering these cars do the quarter mile at an average speed of 240 mph and 6.0 seconds!) Photographs of New England Dragway by Sharon Demmerle.

The "Boston Shaker"

### Things to note in the game:

- the car starts out in first gear, no need to shift into it.
- downshifting is not allowed, although a player can skip gears (this is not good strategy).
- to find out when an engine will blow, just experiment. It is partially random.
- being too quick in shifting can hurt since the program may "miss" the shift. Experiment around for the best speed.

The "Motown Shaker"

**CHRISTMAS**

**“SHOW AND TELL”**

**A Fun Game of Quick Recall for  
the TRS-80 by Randy Hawkins**

**SHOW AND TELL** is a game for the TRS-80 which tests your ability to remember a series of short phrases and also provides some humorous results. The game program is written for two players, takes slightly less than 4K of memory, and is in Level II BASIC. In some ways, **SHOW AND TELL** is similar to other memory quiz games (such as Concentration), but it is a challenging and entertaining game in its own right.

After entering your names, a screen of 9 words or phrases will flash on the game board for a few seconds. Try your best to memorize the phrases and their positions on the board. After the board is cleared, a question will be directed to one of the two players. That player will try to remember the correct answer and respond with the number corresponding to that answer. If he is correct, he receives one point and the right to continue. If he is wrong, he may come up with a hilarious answer. (Q: Who said Humbug? A: Rudolph). The game continues until all 9 questions have successfully been answered, and goes on to a second round where all questions are worth 2 points. The winner is the player with the most points after two rounds.

Because of the random number function in the program, no two games will be exactly alike. Even though the questions and answers will be the same,

their position on the board and the order in which the the questions are asked will always be different. If you do tire of the questions and answers provided, however, it is a simple matter to make up your own series. Just remember to keep all the answers similar in nature (for example, places, things, people's names, actions, etc.) so that those funny combinations of questions and answers will always turn up. The questions and answers are placed in the data statement of lines 470-550 for round one, and lines 560-640 for round two. (Editor's note: as you can see, we altered the data to create a Christmas game.)

As you become more adept at memorizing the phrases, you might wish to shorten the time the phrases are displayed at the beginning of the game. This is done by changing the upper limit of the FOR-NEXT loop of line 1040.

An alternative to the DATA statements might be reading the data off a file from the cassettes. In this way, many sets of questions and answers could be held so that a completely new game could be played with each execution.

Except for the optional changes suggested above, the program should be ready to run. So find a friend, and play "SHOW AND TELL", and see how good your memory really is.

```

# TIRED OF DISK ERRORS?

**STOP BLAMING YOUR DRIVES —  
FIX YOUR DOS!**

NEWDOS, by Apparat, is the third generation disk operating system for your TRS-80. NEWDOS corrects over 70 errors and omissions in TRSDOS 2.1 and disk BASIC, yet the two are completely compatible! Programs and files saved under one can be used with the other interchangeably. Going from TRSDOS to NEWDOS is like going from Level I to Level II: more power, more convenience, greater speed.

## NEWDOS      NEWDOS+

- Use all DOS commands (incl. directory) in BASIC
- Automatically load and run a BASIC program on power-up
- Produce variable cross-reference tables
- Open 'E' to add to sequential files
- Append files
- Use your line printer as a screen printer
- Renumber BASIC programs
- End keyboard bounce
- Editor/Assembler for disk
- Disassembler (Z80 machine code)
- LM Offset—allows transfer of any system tape to a disk file (automatically relocated)
- BASIC1—Level one BASIC saved on disk
- LV1DSKSL - not a typo, this saves and loads BASIC1 programs to disk
- DIRCHECK—tests and lists disk directory
- SUPERZAP—display/print/modify any location in memory or on disk

**And, best of all, say goodbye to system crashes, lost data and wasted time caused by your old, bug-ridden system software.**

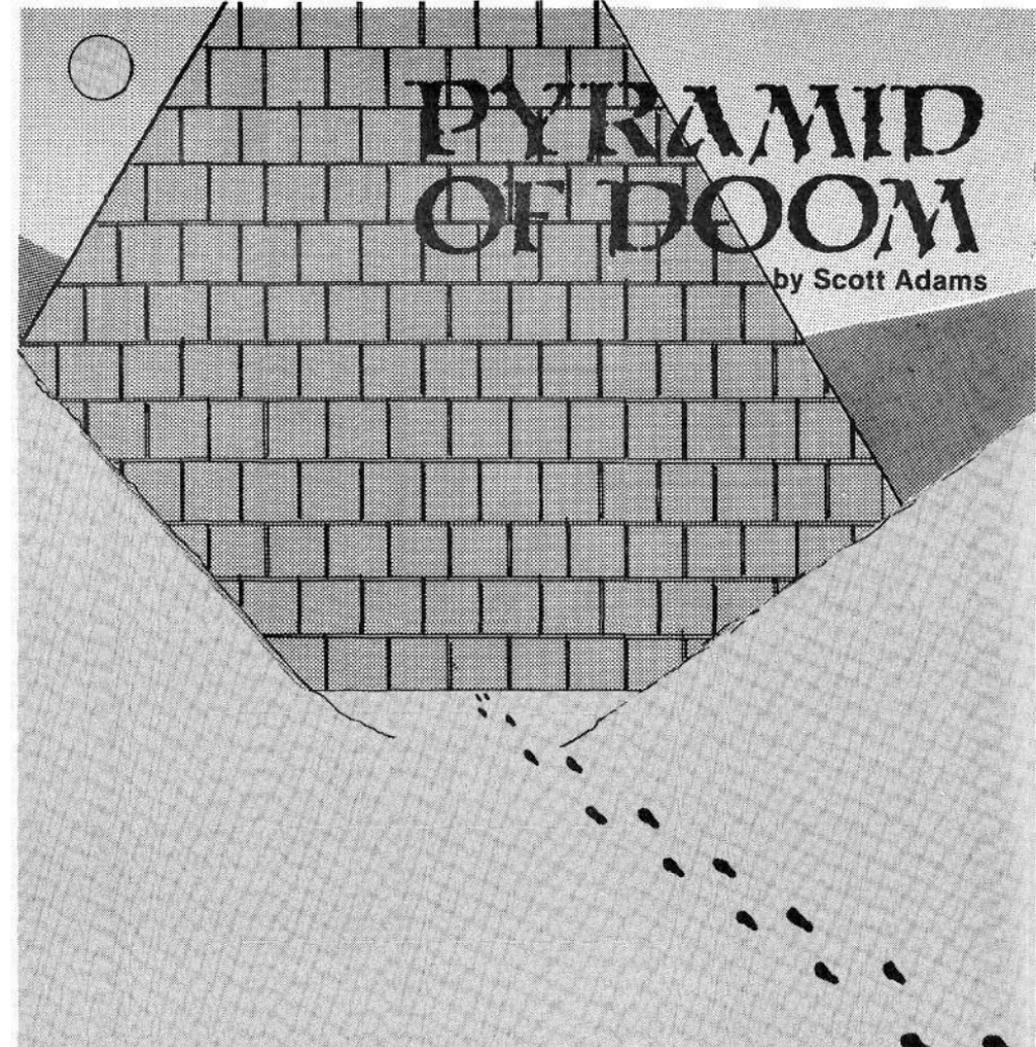

Apparat's NEWDOS is fully documented and available for only \$49.95.

**NEWDOS+, just \$99.95**

**NOTE:** Use of this software may require documentation available only with the purchase of Radio Shack TRSDOS and/or the Radio Shack Editor/Assembler.

The logo for The Software Exchange, featuring the letters 'TSE' in a stylized, bold, outlined font.

# ST80D

Lance Micklus'  
ST80-the Smart  
Terminal Program-  
just got SMARTER!!

ST80D contains extensions for disk drive systems to exchange files with a timesharing computer or another TRS-80.

## USING ST80D, your TRS-80 can do all this and more:

- Gather and pre-format data, store it on disk, then transmit it to a timesharing computer for processing.
- Processed data from the timesharing computer can then be sent back to the TRS-80.
- One TRS-80 can generate a data base and share it with another TRS-80 thousands of miles away by telephone.
- Users may customize their terminal program by redefining the translation tables. Conversion from one set of tables to another takes only seconds.
- Auto logon feature sends your account name, number and password upon request.
- ST80D can transmit any type of TRS-80 ASCII file, including BASIC programs stored in ASCII format, and most BASIC data files. Binary files can also be transmitted from one TRS-80 to another, allowing even machine language programs to be sent over the phone.

**ST80D is a practical, full-feature terminal program that has been used on a variety of timesharing systems.** These include IBM 370, Honeywell Sigma/6, Harris/7, DECSYSTEM 20, Dartmouth Timesharing, CDC Cyber and HP 2000.

If you're looking for a professional quality product, **not an amateur program**, then order ST80D today!

The logo for The Software Exchange (TSE) features the letters 'TSE' in a large, bold, stylized font with a jagged, hand-drawn appearance. The letters are white with a thick black outline.

**The Software Exchange**

# TOWERS OF HANOI

by Chet Kaczneski

The object is to move up to seven disks from a left hand needle to a right needle, using a middle needle as necessary, in the least amount of moves. The rules are:

- Only the top disk may be moved in any particular stack.
- Only one disk at a time can be moved.
- A larger disk cannot be placed upon a smaller one.

The program checks for validity of inputs. There is one special code that redraws the screen.

```

## Your BASIC Bookstore

---

**LEARNING LEVEL II** by David Lien.  
The long-awaited follow-up to the  
much-loved Level I User's Manual.

\$15.95 + \$1 shipping

---

**THE BASIC HANDBOOK:** The book  
you need to learn new commands  
and refer to commands you know  
already. It gives routines for conver-  
ting programs which require a com-  
mand your BASIC doesn't have. Great  
for converting programs from other  
BASIC's.

\$14.95 + \$1 shipping

---

**THE LITTLE BOOK OF BASIC STYLE:**  
Add style, efficiency, and productivi-  
ty to your programming. Move up  
from designing business systems for  
lemonade stands to Maxim's of  
Paris!

\$5.95 + \$1 shipping

---

**INTRODUCTION TO TRS-80  
GRAPHICS:** A Guide to SET and  
RESET graphics on the TRS-80.  
Covers constructing geometric  
figures, plotting curves, PRINT and  
PLOT positions in Level I BASIC.

\$7.95 + \$1 shipping

# For Machine Language Programming

---

## BEGINNERS

**TRS-80 ASSEMBLY LANGUAGE PROGRAMMING:** The best current introduction to machine language at a bargain price. This is not a series of easy lessons, but an intermediate level discussion of what you can do in machine language.

\$3.95 + \$1 shipping

---

## JOURNEYMEN

**Z-80 INSTRUCTION HANDBOOK:** Reference guide for the Z-80, giving the instructions and telling briefly how to use them.

\$4.95 + \$1 shipping

---

**Z-80 SOFTWARE GOURMET GUIDE AND COOKBOOK:** Well over 100 utility, search, sort, and arithmetic routines, plus how to use them and what they do. Well written and easy to understand.

\$14.95 + \$1 shipping

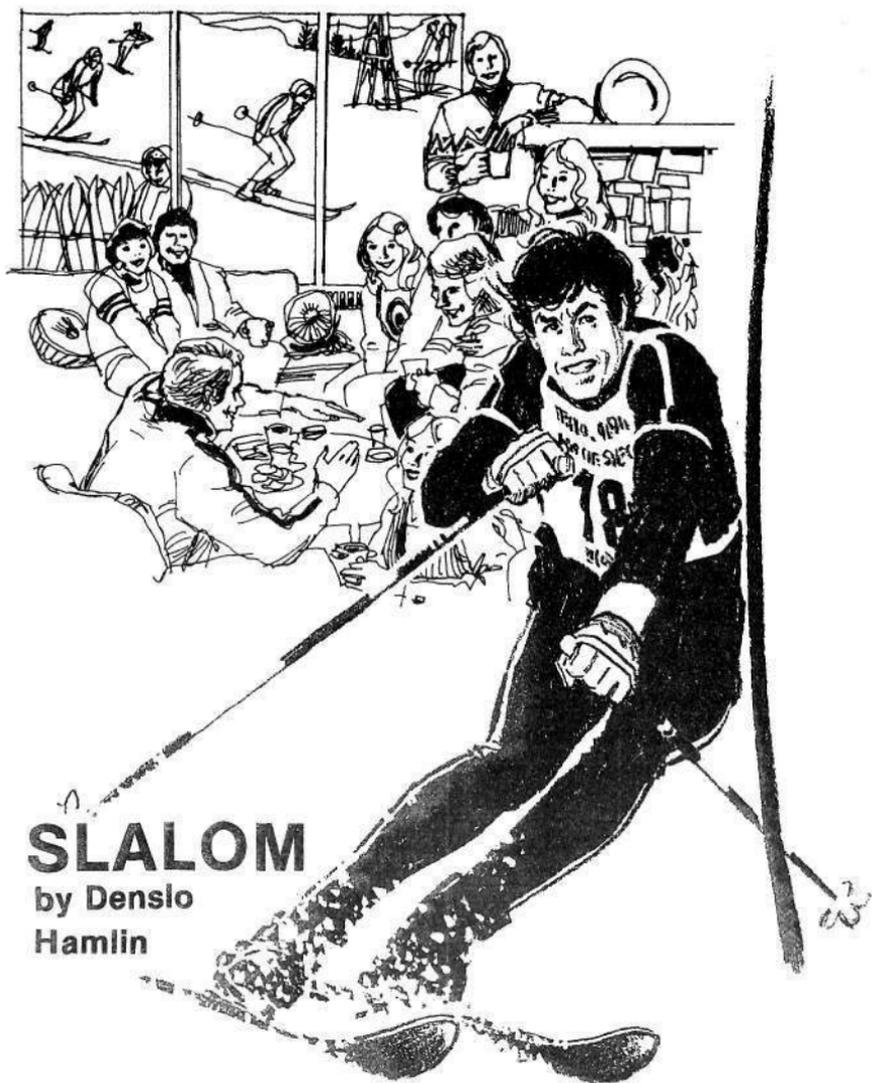

---

## MASTERS

**SARGON - A COMPUTER CHESS PROGRAM:** Program Sargon into your computer using the Assembler, or use the listings to understand how it is done. Many useful subroutines.

\$14.95 + \$1 shipping

---

# SLALOM

by Denso  
Hamlin

One definition of the period from Monday morning to Friday afternoon is "an interval between ski weekends dedicated to paying for the lift tickets". With this program, you can ski every day after work without a lift ticket. With daily practice, you might be good enough for the Olympics.

**\*\*These two offers expire January 31, 1980\*\*  
NO SUBSTITUTIONS ON PACKAGE PRICES**

**\*\*\*DISK EXPANSION PACKAGE\*\*\***

**HARDSIDE SPECIAL PRICE \$889.95**

This package includes everything necessary to add disk capabilities to your TRS-80. To buy everything in this package at the local Radio Shack store would cost \$1100.00.

**PACKAGE INCLUDES:**

- 16K RAM Expansion Interface
- PERCOM Data Separator, Installed
- PERCOM TFD-100, 40-track disk drive
- Dual disk drive cable
- NEWDOS Disk operating system
- 10 BASF diskettes

**\*\*\*DELUXE DISK EXPANSION PACKAGE\*\*\***

The Deluxe way to get everything you need at a great savings.

**PACKAGE INCLUDES:**

- 32K RAM Expansion Interface
- PERCOM Data Separator, Installed
- Dual PERCOM TFD-100, 40-track drives
- 4-drive cable
- NEWDOS+ Disk Operating System
- 20 BASF diskettes

**HARDSIDE SPECIAL PRICE \$1449.95**

**\*\* EFFECTIVE: DECEMBER 1, 1979 \*\***

Announcing a new service from SoftSide Publications

# Line Listing Service

Line listings .01 per line plus \$1.00 postage and handling.

You don't have a printer? Want listings of your programs?  
(Add .50 or enclose stamped mailer for return of your  
cassette or disk, if you want it back.)

Procedure: Send cassette or diskette and payment to

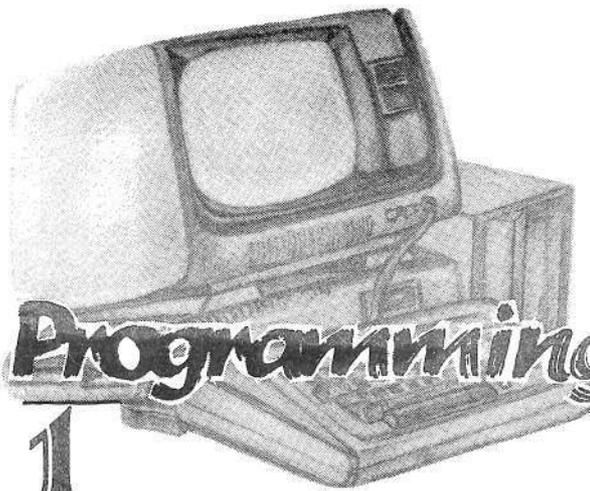

## LINE LISTING SERVICE

**P.O. Box 68, Milford, NH 03055**

Sorry, No level I, machine, or assembly language programs.

Do not include orders, submissions, or questions in the  
same package.

Make sure you include your mailing address.

# Programming Hints

## 1

There is a fascinating little bug in TRS-DOS 2.3. The password protection gives up after one try. The first time you try to copy an uncopyable file it will give you the

error message "FILE ACCESS DENIED". Just try to copy it again - this time you should succeed.

---

## 2 IF ... THEN ... ELSE

The most frequent error in software submitted to SoftSide for publication is misuse of the THEN command. There are several considerations:

- (1) Yes, you can often replace THEN with a comma, but THEN only uses one byte of memory in Level II storage, just like a comma, so ... please don't.
- (2) Yes, you can often omit the command entirely, but ... (a) ELSE will not work without THEN. (b) Arithmetic operations often fail without THEN So please include it.

- (3) THEN and ELSE imply an automatic GOTO. These are correct:

```
IF A=1 THEN 100 ELSE 200
```

```
IF A=1 THEN GOSUB 100  
ELSE GOSUB 200
```

These lines are **WRONG**:

```
IF A=1 THEN GOTO 100  
ELSE GOTO 200
```

```
IF A=1 GOSUB 100 ELSE  
GOSUB 200
```

```
IF A=1 GOTO 100 (THEN  
is correct and is just as  
easy to type.)
```

---

## 3 DELETE

When you have a program that takes a lot of memory, needs instructions, and uses string or array space, you can use the DELETE command to use some memory twice. You must cue the user to type RUN after the DELETE command, as it stops the execution of the program. Place your CLEAR and DIM statements in the second program, and your instructions in the first. Try this sample program to illustrate the method.

```
10 PRINT "THIS WOULD BE  
THE INSTRUCTIONS  
20 PRINT  
30 PRINT "TYPE RUN"  
40 DELETE 10-40  
50 CLEAR 5000: DIM A(1000)  
60 PRINT "THIS IS THE SE-  
COND PROGRAM"  
70 PRINT "IF YOU LIST IT,  
YOU WILL FIND LINES 10  
TO 40 MISSING"  
80 PRINT  
90 LIST
```

---

## 4 CLEAR PORTION OF SCREEN

To clear only a portion of the screen, PRINT CHR\$(31). This will clear from the point you print it to the end of the screen. Try this short program.

```
10 FOR A=1 TO 1000:  
PRINT@ A, "A";:NEXT  
20 PRINT@ 256, CHR$(31);  
"THIS IS THE NEXT  
LINE."
```

---

## 5 EXTENDED TAB

This subroutine will allow you to TAB past 63 on your line printer.

```
30000 INPUT "TAB";T
```

```
30010 LPRINT STRING$  
(T-PEEK(16539),32);
```

Thanks to Will Hagenbuch of  
Nepenthe Programs.

# MAIL LIST II

by Roger Robitaille, Sr.

IDEAL for all sorts of small mailing applications, such as small businesses, clubs, churches; for advertising, newsletters, announcements, press releases -- endless possibilities. We use it for a 15,000-name mailing list, yet it is perfect for lists as short as 100 names! You can store 1000 records per data disk, use as many disks as you like . . .

Each record includes:

RECORD NUMBER  
RECORD CODE  
COMPANY NAME  
NAME  
ADDRESS  
CITY/STATE/ZIP  
PHONE NO.  
GREETING  
PRODUCT CODES  
DATE

Utilities include SORT, MERGE, MOVE, BREAK, EXAMINE, and UPDATE.

Prints labels 1, 2, or 3 across.

Sequential file structure makes the most efficient use of disk space: all alphabetic items can be as long as necessary.

**EVEN ALLOWS DATA ENTRY ON A SEPARATE 4K, LEVEL II CASSETTE SYSTEM.**

2 Disk Drive, 32K minimum \$99.95

# Bug Report

## Ten Pin Bowling (line 30)

January

If B1 does not have 5 spaces, the program will not work properly. B1=" "

## All Star Baseball (lines 3890, 3910, 3940)

July

The bunts in these lines need to count as times at bat. Add the following to each of these lines:

:AB(IN)=AB(IN)+1

## Melt Down (lines 1920, 1930, 1960, 1970, 1980)

September

Change MI in each line to W1, or the meters will not work.

## Westward 1847 (line 130)

October

Our printer did not print the extra line feeds (down arrow required) in line 130. There must be one line of space between each line of text.

## Energy Cost (line 830)

November

A\$(1,0) should be A\$(B,0)

## 9 Games for Pre-School Children

by George Blank

Until they go to school, children think that learning is fun, not work. Is this the reason that they learn so much faster in the early years? And learning is great play. With these games children teach each other the

alphabet, addition and subtraction, recognition of letters and words, even art as they play with patterns on the screen. The games are written for ages four to six. The author has a degree in education, with graduate study in child development and counseling, plus a wide variety of teaching experience in industry, the military, public and private schools, and churches. If you have children, and you also have a TRS-80, then you should have **Nine Games for Pre-School Children**. All nine games and the menu are in the computer at one time, and the children will quickly learn to select the one they want. **Level II, 16K \$9.95**

**TSE**

THE SOFTWARE EXCHANGE 6 South St., Milford, NH 03055

**Editor's Recommendation:** This is one of the most valuable programs I own. I have used it for tasks as varied as debugging, disassembling Level II, and storing my copy of Sargon II on disk for fast loading. The only other program I have that compares in value is NEWDOS. — **George Blank**

This is what you can do:

## COMMAND

- |                               |                                                |
|-------------------------------|------------------------------------------------|
| <b>A - ASCII DUMP:</b>        | Display ASCII equivalent of memory block       |
| <b>B - BINARY ARITHMETIC:</b> | Add/subtract in hex and decimal                |
| <b>C - CHECK TAPE:</b>        | Check cassette tapes for proper checksum       |
| <b>D - HEX DUMP:</b>          | Display Hex equivalent of memory block         |
| <b>E - EDIT:</b>              | Enter, examine, or modify memory in hex code   |
| <b>F - FIND 1 BYTE:</b>       | Find and display single-byte hex codes         |
| <b>G - GOTO:</b>              | Go to and execute program at specified address |
| <b>H - HUNT 2 BYTES:</b>      | Find and display two-byte addresses            |
| <b>I - INITIALIZE/INPUT:</b>  | Initialize or input data from port             |
| <b>K - KEYBOARD ECHO:</b>     | Type directly to screen or terminal            |
| <b>L - LOAD AND GO:</b>       | Load a cassette tape and execute program       |
| <b>M - MOVE:</b>              | Move any block of memory to specified location |
| <b>O - OUTPUT:</b>            | Output hex value to specified output port      |
| <b>Q - CHECKSUM:</b>          | Compute checksum of specified memory block     |
| <b>R - READ TAPE:</b>         | Read cassette tape (header or standard)        |
| <b>S - SYMBOLIC DUMP:</b>     | Display memory in ZILOG Z-80 mnemonics         |
| <b>T - TEST MEMORY:</b>       | Test memory block and display errors           |
| <b>U - USER:</b>              | Allows user to write and execute new commands  |
| <b>V - VERIFY MEMORY:</b>     | Compare any two blocks of memory               |
| <b>W - WRITE TAPE:</b>        | Write any memory block to cassette tape        |
| <b>X - EXCHANGE:</b>          | Interchange any two blocks of memory           |
| <b>Z - ZERO MEMORY:</b>       | Write zero or any hex code into memory         |
| <b>@ - BREAKPOINT:</b>        | Inserts breakpoint AT specified address        |
| <b>P - PUNCH:</b>             | Writes cassette tape in LEVEL-II SYSTEM format |
| <b>R - READ:</b>              | Read SYSTEM tape, display name, start address  |
| <b>L - LOAD:</b>              | Loads specified disk sectors into memory block |
| <b>\$ - SAVE:</b>             | Saves memory block into specified disk sectors |
| <b>Y - TRS232:</b>            | Set print parameters (baud, etc.) for TRS232   |
| <b>-&gt; - PRINT:</b>         | Directs output to printer as well as screen    |

# I N V E N T O R Y 'S'

by Roger Robitaille, Sr.

**Inventory 'S'** is an exciting advance in small business software for the TRS-80. Its in-memory system of data storage solves the problems of both sequential and random access files while providing extremely fast, random access to any record. Other advantages include the ability to use any combination of characters for stock number, an exceptionally flexible record format (field names are user-definable), and the ability to store data to tape or disk and upgrade at any time. Up to 150 items can be stored per 16K of available memory, with stock number, description, cost, vendor, reorder, and profit data in each record. An important feature is the ability to use your present stock numbers (a sort function is included), unlike competing systems which force you to use a different "record number". User-definable screen and printer reports let you see just the data you need, when you need it.

**Inventory 'S'** is an extremely powerful business management tool which can be used effectively with a 16K, tape based system or a 48K, disk and printer system — a claim nobody else can make!

**Tape version, 16K (min.), Level II — \$24.95**

**32K Disk version — \$39.95**

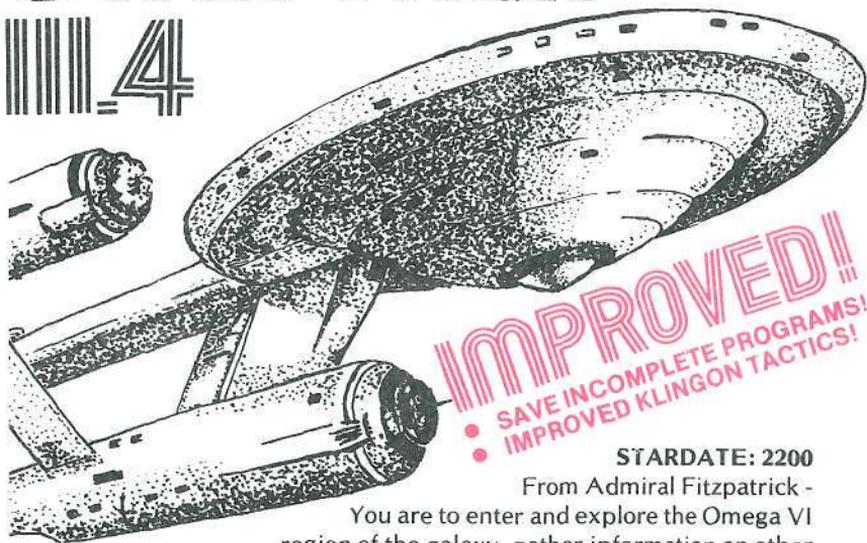

(same as tape, but on diskette with additional Disk I/O)

**The Software Exchange**

6 South Street, Box 68, Milford, NH 03055 603-673-5144

# STAR TREK

III.4

**IMPROVED!!**  
• SAVE INCOMPLETE PROGRAMS!  
• IMPROVED KLINGON TACTICS!

**STARDATE: 2200**

From Admiral Fitzpatrick -

You are to enter and explore the Omega VI region of the galaxy, gather information on other inhabitable planetary systems you may encounter and defend yourself against hostiles in case of attack. You are in command of the Starship ENTERPRISE and her ship's complement of 371 officers and crew. Omega VI is composed of 192 quadrants containing star systems and planets (a few habitable). Information on Omega VI is sketchy, but astronomical hazards such as pulsars, Class O stars and black holes are known to be present in the region. It is also patrolled by Klingon battle cruisers, so look before you leap.

Available on Digital Cassette  
for Level II, 16K - \$14.95

#### — Specs: Star Trek III.4 —

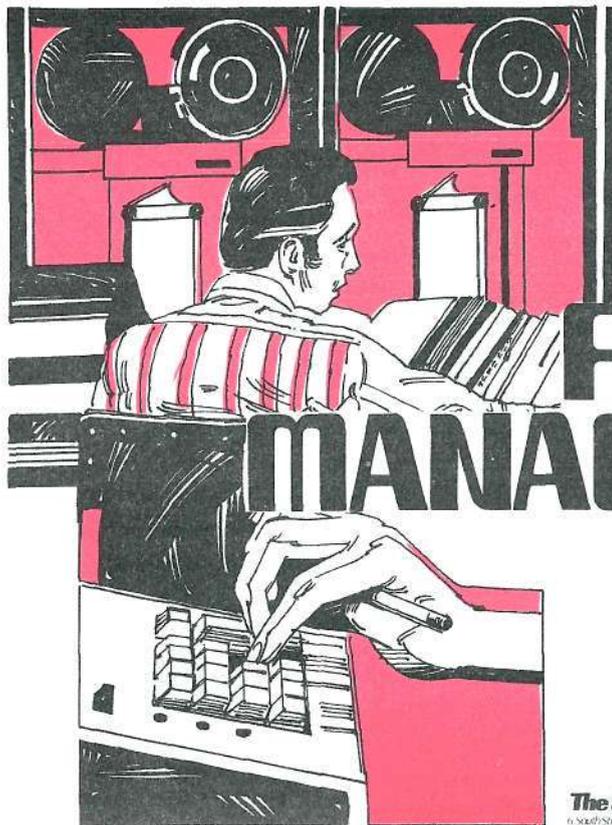

**Play Board:** 8 by 8 by 3 quadrants  
**Weapons Systems:** Phasers and Photon Torpedoes  
**Power Systems:** Warp and Impulse  
**Computer Systems:** Science and Ship's computer  
**Sensors:** Long and Short Range  
**Reports:** Damage Control and Status  
**Play Elements:** 20 Klingon battle cruisers, 100 stars and planets, black holes, pulsars

**NEW!** utility package from NEPENTHE PROGRAMS

# FILE MANAGER 80

**TSE**

The Software Exchange  
6 South Street, Box 68, Millis, MA 01935 617-673-5114

Programming utility for professional programming.

File Manager 80 will organize tape and disk file routines, print a dictionary of items specified by you, edit items already specified and create record layouts using the items you have described. It will even create the code for your input/output routines, including format, sub-record, get, and put routines, and store them as temporary files to merge into your programs. It will maintain a dictionary of the subroutines you create and the variables used.

Minimum configuration is one disk and 32K of memory, but two disks are strongly recommended. Comes on disk with manual for \$49.95.

# FASTGAMMON

Backgammon is a two-person game.

In FASTGAMMON the computer is one player (its men are O's) and you are the other (your men are X's).

Whether you are a beginner or an experienced backgammon player, FASTGAMMON can help you improve your game. First of all, you now have an opponent that is always ready and willing to play. There is no substitute for experience — the more games you play the more you learn about backgammon. But there is another unique method by which FASTGAMMON can help you improve your game.

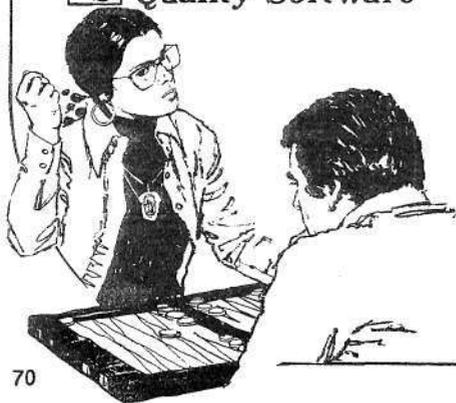

By selecting "2" when the starting message is displayed, the same sequence of rolls that occurred in the game just played (the last game for which you selected "1") will occur again.

## HOW GOOD IS FASTGAMMON?

We make no claims that FASTGAMMON plays at an expert level. In fact, good players will notice obvious mistakes that the computer makes from time to time. The game of backgammon has many subtleties, and the algorithm programmed into version 1 of FASTGAMMON is a fairly simple one. There is an advantage that the computer has, however, over human players — the computer never forgets what it "knows". Due to oversights, distractions, or haste, human players often forget what they know. This fact is the edge that makes FASTGAMMON competitive against good players. Level II 16K \$19.95

# INPUT

A COLUMN OF YOUR LETTERS

Gentlemen:

As to several different possibilities for formats for SoftSide, my suggestion is to have one or two of each kind of format a year, that is, to have two 16K programs one month, and 6 or 7 short ones another, etc. . . You could then advertise SoftSide as kind of a Magazine-Of-The-Month. Example: January-Double 16K Issue, February-Educational Issue, March-Practical Applications Issue.

Another suggestion I have is for an issue with several programs all grouped around a central theme, for example: a Graphics Issue, or a Peek/Poke Issue, etc., each one showing a different aspect of the TRS-80 in terms of programming.

I think you should go back to splitting a program into sections and describing how each section works and what it does . . . this was one of the best features of SoftSide, and you appear to have dropped it around January, 1979. This is what made the magazine so appealing . . . it actually explained how it all worked! I have taught programming techniques to other programmers using sections from early SoftSide issues, showing specific parts of certain programs and reading out how they work . . . This is the ONLY thing wrong with your magazine. . .

that is to say, that you have dropped this important feature.

Allan Hurst  
Chicago, IL

---

Dear Sirs;

Today I received the second shipment of TRS-80 programs on cassette. The shipment was again very prompt and the programs loaded fine. Thanks to the good service I am enjoying my new programs shortly after I ordered them. Thanks for your good service!
